

Welcome!

At Manitoulin Lodge, we believe our Convalescent Care Program has made a huge difference in those who are in recovery. We provide a great setting and accommodations, the support and encouragement to get you back to your optimum health. Anything is possible with a little hard work, motivation, and determination and we are willing to work with you every step of the way.

Specialized Care to Meet Individual Needs

The Convalescent Care Program at Manitoulin is for those individuals from the hospital or in the community who need extra support following surgery or illness. It is comprehensive and specialized rehabilitation plan designed for those who are motivated to return home.

The Convalescent Care Program is not well suited for those who require Active Rehab in a hospital setting, Complex Continuing Care, Palliative Care or Permanent Long-Term Care Home Admission.

Individual Needs

Our friendly and professional staff will contribute to your recovery by setting goals in the areas of strength and independence. A multi-disciplinary team are available 24 hours a day, 7 days a week to ensure optimal health and well-being regarding:

- Nursing Care
- Therapies OT/PT
- Therapeutic Recreation
- Medical Care
- Restorative Care
- Nutritional Support
- Spiritual Support
- Personal Support

Success Story

Upon admission to our Convalescent Care Program, Bea was only able to dangle his feet over the side of his bed for a short period of time. Following the in-house

physiotherapy assessment, the restorative team worked together on a plan, setting short and long term goals reflective of Bea's individual needs. The long term goal was for Bea to return to his previous full functioning abilities as prior to his fracture. After eight days into the program, Bea was able to feather weight bear to his right leg using a platform walker with moderate assistance. Every day, several times a day Bea would stand up as long as he could with the platform walker. He gradually built up his strength and balance up to be able to stand 5 minutes. A new short term goal was set and the plan was to increase his activity to walking 2-3 steps while continuing to use the platform walker. For another 7 days Bea progressed and was able to pivot transfer with the platform walker and supervision.

— Berend "Bea" H.
